FA report of TP NG issue (NDF)

JUNGLIM   G140HAB01.2

Problem Statement

● General Information

Brand Customer	JUNGLIM	Defect Phenomenon	TP NG (NDF)
SI Customer	NA	Defect Rate or Q’ ty	1pc
AUO Model	G140HAB01.2	Defect Station	Line Reject
AUO S/N	D35534N8DUZZZS0100	RMA No.	762612100467
Array/Cell/Beol/Module	S01	Chip ID	NA
Week Code	2519	Product Provider	YH
FMA analysis grade		Issue Date	2026/03/05

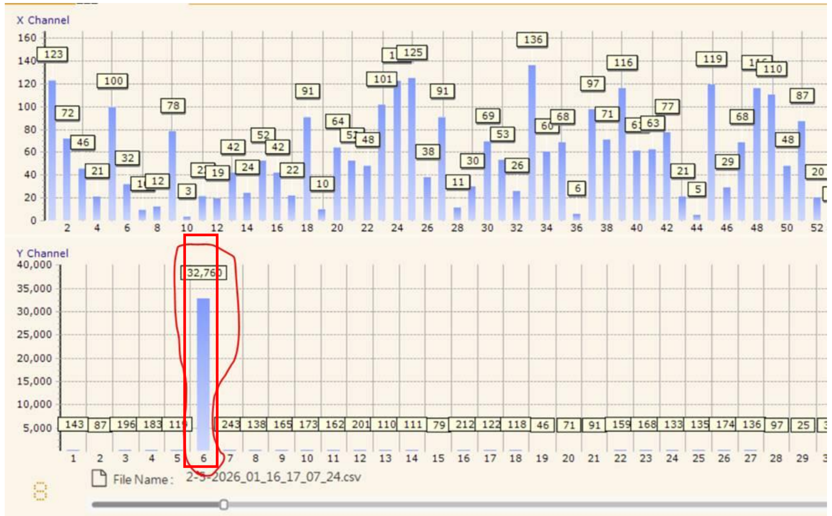
● Defect Panel S/N Picture

Problem Statement

- Describe the phenomenon

1) JUNGLIM found one piece of G140HAB01.2 panel with TP NG (Intermittent Touch Malfunction)
2) After checking the phenomenon, the symptom is not visible in AUO.

- Defect information



Customer reported abnormal TX6 value

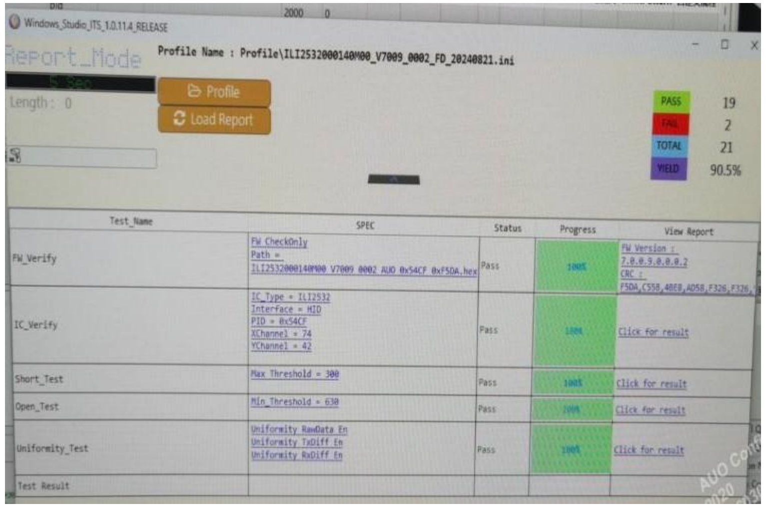
No repair history

Root Cause Analysis

- Step1:During the full panel functional test, all test cycles (20 cycles) passed without any abnormal findings. The Uniformity test also showed no NG result, and no issue related to TX6 was observed during the evaluation.

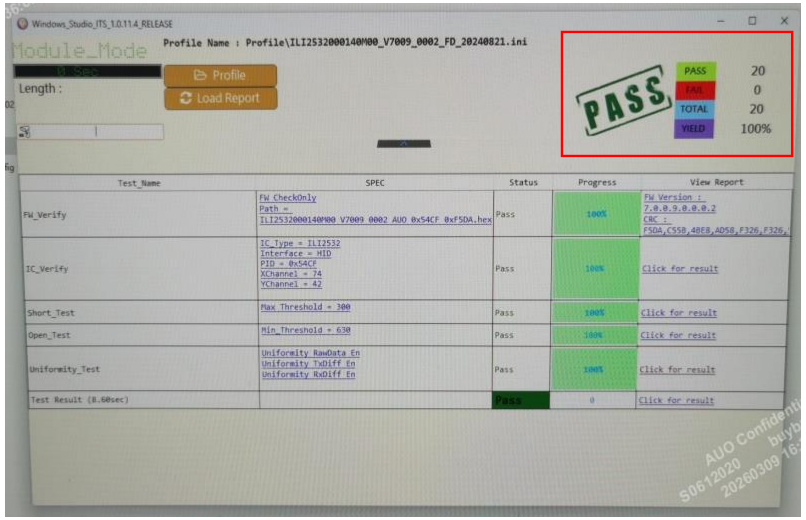


No TP NG detect

AUO

Root Cause Analysis

- Step2:After removing the lens, the standalone panel was retested for 20 cycles, and no TP NG was observed.

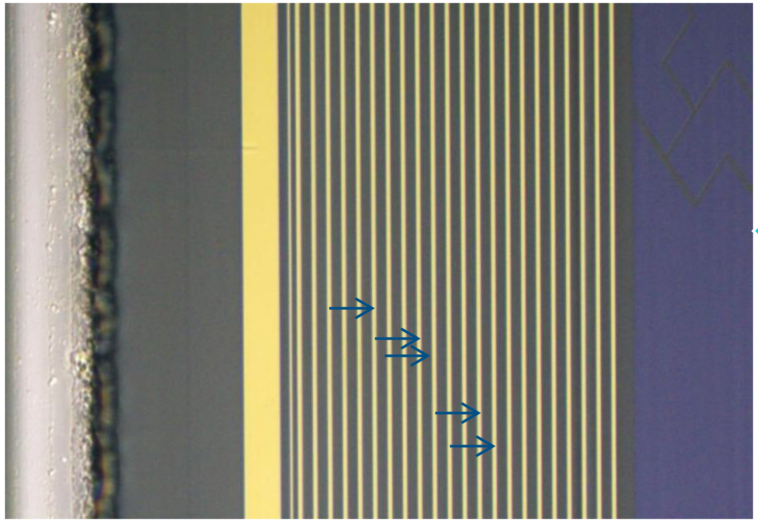


no TP NG was observed

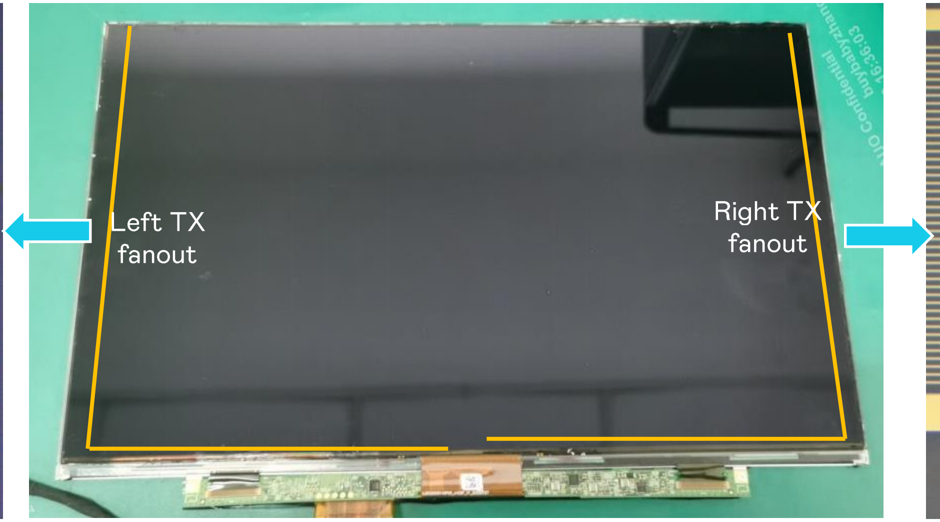
Root Cause Analysis

- Step3:Under OM inspection, the short-edge TX fan-out traces were checked.

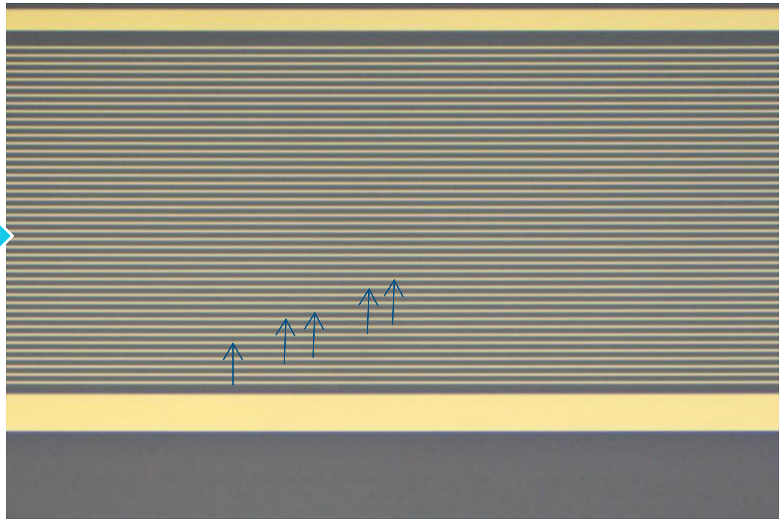
  No short or damage was observed on any of the related TX fan-out lines.



TX6/9/10/13/14
fanout OK



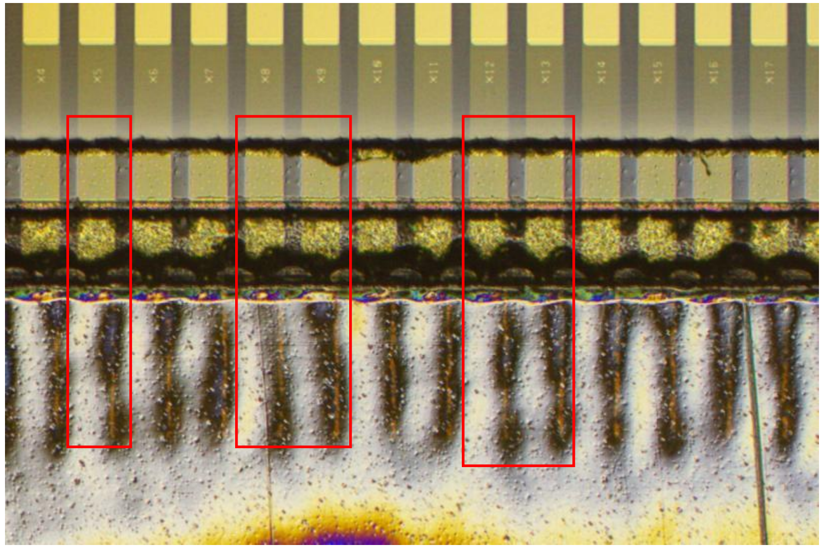
TX fan-out
distribution



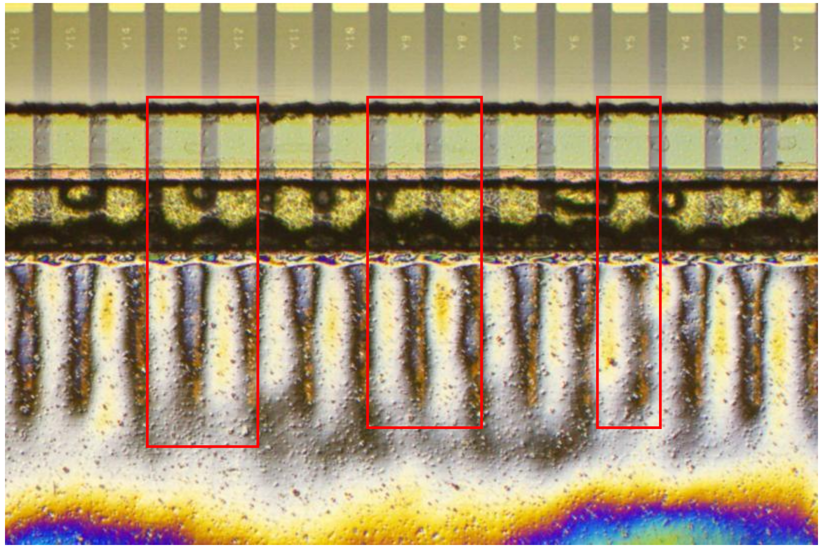
TX6/9/10/13/14
fanout OK

Root Cause Analysis

- Step4:Under OM inspection, the TP FPC bonding at the corresponding TX6 / TX9 / TX10 / TX13 / TX14 locations was examined. Clear bonding marks were observed, indicating that the bonding condition is normal with no signs of open or damage.



Left side TX6 / 9 / 10 / 13 / 14 bonding OK



Right side TX6 / 9 / 10 / 13 / 14 bonding OK

Conclusion

- Conclusion and Countermeasure

1.During the analysis, no abnormal TX6 behavior as reported by the customer was observed.
After removing the lens, multiple retests were performed and no TP NG was reproduced. 。
